VACUUM CHAMBER

Model TPA2001R

SET UP AND OPERATING INSTRUCTIONS

PLEASE TAKE SAFETY PRECAUTIONS WHEN USING YOUR VACUUM CHAMBER. Always wear safety glasses, no close or prolonged viewing through Lexan® lids. Never use the Lexan lids as a cutting surface.

Diagrams with this manual may not be drawn proportionally. Due to continuing improvements, actual product may differ from the product described herein.

SAVE THIS MANUAL

Keep this manual for the safety warnings and precautions, assembly, operating, inspection, maintenance and cleaning procedures. Write the product’s serial number in the back of the manual near the assembly diagram (or month and year of purchase if product has no number). Keep this manual and the receipt in a safe and dry place for future reference.

GENERAL SAFETY RULES

WARNING! Read all instructions Failure to follow all instructions listed below may result in serious injury. The term “vacuum chamber in all of the warnings listed below refers to your ArtMolds Vacuum Chamber.

SAVE THESE INSTRUCTIONS

1. Work area safety
   a. Keep work area clean and well lit. Cluttered or dark areas invite accidents.
   b. Keep children and bystanders away while operating a vacuum chamber. Distractions can cause you to lose control.

2. Personal safety
   a. Stay alert, watch what you are doing and use common sense when operating a pneumatic tool. Do not use a vacuum chamber while you are tired or under the influence of drugs, alcohol or medication. A moment of inattention while operating pneumatic tools may result in serious personal injury.
   b. Use safety equipment. Always wear eye protection. Safety equipment such as dust mask, work gloves, non-skid safety shoes, hard hat, or hearing protection used for appropriate conditions will reduce personal injuries.
   c. Dress properly. Do not wear loose clothing or jewelry. Keep your hair, clothing and gloves away from moving parts. Loose clothes, jewelry or long hair can be caught in moving parts.
   d. If devices are provided for the connection of chemical vapor extraction and collection facilities, ensure these are connected and properly used. Use of these devices can reduce vapor-related hazards.

3. Vacuum Chamber use and care
   a. Do not over tighten the pneumatic fittings Use the correct tool for your application. The correct tool will do the job better and safer at the rate for which it was designed.
   b. Disconnect the vacuum chamber from the air source before making any adjustments, changing accessories, or storing.
c. Store your vacuum chamber out of the reach of children and do not allow persons unfamiliar with the vacuum chamber or these instructions to operate it. **Vacuum chambers can be dangerous in the hands of untrained users.**

d. Maintain your vacuum chamber by keeping the gaskets and lids clean and debris free. Check for misalignment or breakage of parts and any other condition that may affect the vacuum chamber operation. If damaged, have it repaired before use. **Many accidents are caused by poorly maintained tools.**

e. Use the vacuum chamber in accordance with these instructions and in the manner intended for the particular type of tool, taking into account the working conditions and the work to be performed. **Use of the vacuum chamber for operations different from those intended could result in a hazardous situation.**

4. Service

   a. Have your vacuum chamber serviced by a qualified repair person using only identical replacement parts. **This will ensure that the safety of the tool is maintained.**

**SPECIFIC SAFETY RULES**

1. Maintain labels and nameplates on the tool. These carry important safety information. If unreadable or missing, contact EnvironMolds, LLC, for a replacement.
2. Avoid unintentional starting. Prepare to begin work before turning on the tool.
3. Do not leave the vacuum chamber unattended when a vacuum pump is operating. Unplug it before leaving.
4. This product is not a toy. Keep it out of reach of children.
5. People with pacemakers should consult their physician(s) before use. Electromagnetic fields in close proximity to heart pacemaker could cause pacemaker interference or pacemaker failure. Caution is necessary when near coil, spark plug cables, or distributor of running engine. Your pump should be off during vacuum evacuation.
6. **WARNING:** The brass components of this product contain lead, a chemical known to the State of California to cause birth defects (or other reproductive harm). (California Health & Safety code § 25249.5, *et seq.*)
7. For proper de-airing it is absolutely essential that the gaskets and the acrylic lids all be perfectly clean and without cuts or cracks. Cracks in the rubber gasket, chips or cuts in the acrylic lids or any particles or other foreign matter which might prevent a smooth and perfect seal between the chamber, the gasket or the acrylic lid(s) can cause air leakage and interfere with the de-airing process.

The warnings, precautions, and instructions discussed in this instruction manual cannot cover all possible conditions and situations that may occur. It must be understood by the
operator that common sense and caution are factors which cannot be built into this prod-
uct, but must be supplied by the operator.

UNPACKING

When unpacking, check to make sure that the item is intact and undamaged. If any parts are missing or broken, please call EnvironMolds, LLC, at the number shown on the cover of this manual as soon as possible.

TOOLS REQUIRED FOR ASSEMBLY

Adjustable Wrench

Petroleum Jelly

ASSEMBLY STEPS

1. Thread the vacuum gauge onto the brass fitting that will attach to the vacuum chamber. Use an adjustable wrench to tighten. Do not over tighten. Plumbers tape is not re-
quired.

2. Take the assembled fitting with gauge and thread it into the side of the chamber. Use an adjustable wrench to snug it up. Do not over tighten. Plumbers tape is not required.
3. Dab a bit of petroleum jelly on the hose barb fitting. Then firmly press fit the plastic tubing supplied in your kit onto the hose barb.

4. Remove the protective papers from both sides of the Lexan lids. Then place one Lexan lid on a clean flat surface.

5. Center one of the two red gaskets on this bottom Lexan lid.

6. Place the PVC cylinder/vacuum chamber evenly in the center of the bottom gasket checking carefully that the entire perimeter of the chamber is sitting evenly on this gasket.

7. Place the second red gasket centered evenly on the top rim of the chamber.

8. The second Lexan lid will be placed over that top gasket to seal your vacuum chamber. Check to see that the gasket is sitting evenly on the rim.

9. Connect your plastic tube to your vacuum source. You are ready to use the vacuum chamber.

OPERATING INSTRUCTIONS

Read the entire IMPORTANT SAFETY INFORMATION section at the beginning of this manual including all text under subheadings therein before set up or use of this product.

General Operating Instructions

NOTE: While not required for operation, it is advisable to mount a quick release air fitting to the Air Fitting. This will make it easier to quickly attach and detach the vacuum hose from this tool. This is available in the air tool section of home improvement and hardware stores.

1. Mix your rubber according to the manufacturer’s directions. Your mixing container must be large enough to accommodate at least four times the amount of material you are vacuuming, to allow for the expansion of the material.

2. Turn your vacuum pump on (not supplied). Depending on the size of your pump your vacuum will reaches 29-inches of mercury\(^1\) in a minute or so. When it does, the material will begin to rise (resembling foam)\(^2\). When it rises it will remain at this heightened level while frothing for about a minute and then collapse. When the material falls it will plateau and not rise any more.

3. Continue to maintain the vacuum for another 2-3-minutes to make certain all of the air has been removed from your material.

4. Turn off you vacuum source and open the vacuum chamber relief valve to allow air to
refill the vacuum chamber. Once the air pressure on the inside of the chamber equals that of the outside you can easily remove the clear Lexan® lid.

5. Remove your material container from the chamber. Pour the material slowly starting from the corner of the mold box, or mold, letting the material flow freely into the box or mold cavity. This method will usually not introduce any new bubbles into the vacuumed material. To insure that the material is totally devoid of air bubbles you can place the entire mold/mold box into the chamber for an additional few minutes. This will assist the material into difficult areas of the mold/mold box.

### MAINTENANCE AND SERVICING

Disconnect the tool from the air outlet before performing any inspection, maintenance, or cleaning procedures.

Damaged equipment can fail, causing serious personal injury. Do not use damaged equipment. If abnormal noise or vibration occurs, have the problem corrected before further use.

**Cleaning, maintenance, and lubrication**

1. **BEFORE EACH USE**, inspect the general condition of the tool. Check for loose screws, cracked or broken parts, and any other condition that may affect its safe operation.

2. **AFTER USE**, clean external surfaces of the tool with clean, moist cloth.

### PLEASE READ THE FOLLOWING CAREFULLY

THE MANUFACTURER AND/OR DISTRIBUTOR HAS PROVIDED THE PARTS LIST AND ASSEMBLY DIAGRAM IN THIS MANUAL AS A REFERENCE TOOL ONLY. NEITHER THE MANUFACTURER OR DISTRIBUTOR MAKES ANY REPRESENTATION OR WARRANTY OF ANY KIND TO THE BUYER THAT HE OR SHE IS QUALIFIED TO MAKE ANY REPAIRS TO THE PRODUCT, OR THAT HE OR SHE IS QUALIFIED TO REPLACE ANY PARTS OF THE PRODUCT. IN FACT, THE MANUFACTURER AND/OR DISTRIBUTOR EXPRESSLY STATES THAT ALL REPAIRS AND PARTS REPLACEMENTS SHOULD BE UNDERTAKEN BY CERTIFIED AND LICENSED TECHNICIANS, AND NOT BY THE BUYER. THE BUYER ASSUMES ALL RISK AND LIABILITY ARISING OUT OF HIS OR HER REPAIRS TO THE ORIGINAL PRODUCT OR REPLACEMENT PARTS THERETO, OR ARISING OUT OF HIS OR HER INSTALLATION OF REPLACEMENT PARTS THERETO.

*Note 1:* Your vacuum pump needs to be capable of pulling 29-inches of mercury at sea level to do an adequate de-airing in the shortest time period. However at higher altitudes you will be unable to achieve 29-inches. For example in the mile high city of Denver 24-inches of mercury is deemed acceptable. However, you will have to run your vacuum several minutes longer than at sea level.

*Note 2:* Thicker and thixotropic rubbers may not rise due to mass. In that case, rocking the vacuum chamber back and forth will enable the de-airing material to move up the container wall and ultimately collapse.

### TROUBLE SHOOTING

<table>
<thead>
<tr>
<th>PROBLEM</th>
<th>SOLUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>No vacuum</td>
<td>1. Check electric power connection. Of your vacuum pump</td>
</tr>
<tr>
<td></td>
<td>2. Check vacuum hose for secure connections and/or cracks or defects.</td>
</tr>
<tr>
<td></td>
<td>3. Ensure that the air valve on the vacuum chamber is completely closed.</td>
</tr>
<tr>
<td></td>
<td>4. Ensure that a good, clean seal is made between the housing, the rubber gasket and the acrylic cover over vacuum chamber.</td>
</tr>
<tr>
<td></td>
<td>5. Ensure that the valve fitting assemble is tight and securely tighten to the chamber body</td>
</tr>
<tr>
<td></td>
<td>6. You can check for leak location using soapy water</td>
</tr>
<tr>
<td>Vacuum level is low</td>
<td>1. Ensure that the air valve on the vacuum chamber is completely closed.</td>
</tr>
<tr>
<td></td>
<td>2. Ensure that a good, clean seal is made between the housing, the rubber gasket and the acrylic cover over vacuum chamber.</td>
</tr>
<tr>
<td></td>
<td>3. Check for leaks</td>
</tr>
<tr>
<td>Water in oil</td>
<td>As the vacuum pump pulls moist air from the atmosphere some of the water vapor is deposited in the oil chamber of your vacuum pump. After every 6-8 hours of use, drain the water through drain valve. The oil and water must have had adequate time to separate prior to draining off the water, and most operators find it advantageous to drain the water immediately prior to a new run rather than to wait for the water and oil to separate at the end of a run.</td>
</tr>
<tr>
<td>Oil overflows from vent does stop vacuum pump.</td>
<td>This should never happen if the pump is properly purged of water as described in “Water in oil” above.</td>
</tr>
</tbody>
</table>
IMPORTANT CHECKS

Proper Seal. For proper de-airing it is absolutely essential that the gaskets and the acrylic lids all be perfectly clean and without cuts or cracks. Cracks in the rubber gasket, chips or cuts in the acrylic lids or any particles or other foreign matter which might prevent a smooth and perfect seal between the chamber, the gasket or the acrylic lid(s) can cause air leakage and interfere with the de-airing process.

Vacuum Air Valve. Prior to operation, close the exhaust valve on the vacuum chamber.

The vacuum pump is not supplied with your vacuum chamber. But we remind you that for continued trouble-free operation your pump should be regularly checked as follows:

Vacuum Pump Oil Level. Vacuum pump oil should be filled to the center of the sight glass to ensure proper de-airing. If, during or after use, it becomes apparent that the level has risen significantly above the center of the sight glass, water has been introduced into the oil. Refer to your Vacuum Pump Maintenance Instructions to remedy.

Vacuum Pump Maintenance. Humid air passes through the pump during the de-airing process. If so equipped, the pump air filter separates most of the moisture from the air with the water settling into the air filter's reservoir. As it accumulates the water needs to be drained through the valve at the base of the reservoir. Every pump is differently configured so check your manual. Also, residual moisture not captured within the air filter reservoir will migrate into the oil within the vacuum pump. That water needs to be drained through the valve usually located at the base of the vacuum pump. See the pump manual.

LIMITED 90 DAY WARRANTY

EnvironMolds, LLC makes every effort to assure that its products meet high quality and durability standards, and warrants to the original purchaser that this product is free from defects in materials and workmanship for the period of 90 days from the date of purchase. This warranty does not apply to damage due directly or indirectly, to misuse, abuse, negligence or accidents, repairs or alterations outside our facilities, criminal activity, improper installation, normal wear and tear, or to lack of maintenance. We shall in no event be liable for death, injuries to persons or property, or for incidental, contingent, special or consequential damages arising from the use of our product. Some states do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation of exclusion may not apply to you.

This warranty is expressly in lieu of all other warranties, express or implied, including the warranties of merchantability and fitness.

To take advantage of this warranty, the product or part must be returned to us with transportation charges prepaid. Proof of purchase date and an explanation of the complaint must accompany the merchandise. If our inspection verifies the defect, we will either repair or replace the product at our election or we may elect to refund the purchase price if we cannot readily and quickly provide you with a replacement. We will return repaired products at our expense, but if we determine there is no defect, or that the defect resulted from causes not within the scope of our warranty, then you must bear the cost of returning the product.
